ACID - pH

एसिड-पीएच

(Selective Biotechnological Purifier & Acidifier)

Enteric bacteria and mycotoxins are responsible for a variety of problems in poultry production system today, most commonly used Organic Acid are formic, acetic, citric, propionic, sorbic, lactic etc., these Organic Acids and their salts are generally regarded as safe (GRAS) for use in animal and poultry feeds.

Organic Acids and their salts inhibit the microbial loads in feed, there by indirectly maintaining a desirable population of beneficial micro-organisms in the Gut.

Organic Acids positively impact the performance in poultry and livestock by constantly keeping the pathogenic micro-organisms under check. Bactericidal action is exerted by pH that causes disassociation and release of Hydrogen, that alters the bacterial metabolism, depleting its energy and causing its death.

Organic Acids reduce pH of the Gut, the acidified digesta reduces production of toxic components by both bacteria and fungus thereby reducing damage to the epithelial lining of the Gut. Lower pH helps increase the gastric proteolysis and protein/amino acids digestibility.

COMPOSITION

Organic Acids (Ascorbic, Citric, Sorbic, Formic, Acetic, Propionic), Ammonium formate, Ammonium propionate along with yeast extract and fatty acids esters in activated base.

INDICATIONS

- **ACID-pH** helps to reduce the gut pH and makes it unfavorable for the multiplication of the disease causing micro-organisms and fungus.
- **ACID-pH** improves nutrient utilization, reduces disease incidences and mortality to increase profits.
- **ACID-pH** is the best **alternative to antibiotic growth promoters** as there are least chances of development of antibiotic resistance of micro-organisms and reduces the duration and cost of treatment.
- **ACID-pH** helps improve the Gut micro flora there by reduces chances of recurring Gut infections and prevents the problems of loose dropping and improves litter quality.

USAGE INSTRUCTIONS

As Sanitizer: 1 ml per 10 ltr of drinking water regularly.

During Stress: 1-2 ml per ltr of drinking water for 5-7 days. Or as recommended by the Veterinarian.

Note: Do not use **ACID-pH** 24 hours before, during & after vaccination through drinking water.

PRESENTATION: 5 Ltrs Jar
